ADDITION FOR SAGE 200

"The Sicon system uses the same database as Sage, so it is an immediate update into Sage. The Barcoding software has certainly smoothed out everything and I'm confident that our stock levels will eventually be 100%"

Steve Lindsell, Korda

Barcoding & Warehousing for Sage 200

Sicon Barcoding & Warehousing is aimed at businesses requiring a real-time understanding of their stock and order processing procedures. With a high-level of integration across Sage 200 and other Sicon modules, plus a great range of devices available to choose from, this solution will appeal to a broad range of client requirements.

Based on an Android platform, the standard functionality required in a typical Sage 200 customer warehouse is delivered via an intuitive, highly functional interface. By using existing stock information already held in the core Sage database, this ensures a single view of stock movements and transactions whilst making the implementation of Sicon Barcoding & Warehousing much more efficient.

With Sage 200 Report Designer supporting many barcode formats, the production of labels further simplifies customer warehouses.

Key Features

- **Fully Integrated with Sage 200** | Sicon Barcoding & Warehousing is written within the Sage 200 development environment using the Sage business objects and utilising the latest Microsoft technologies for user interface.
- **Real-time Data Availability** | Integration with Sage 200 and the Sicon modules is in real-time, with the handheld devices communicating directly with Sage 200 using Web API technology. This means there are no external databases to setup and maintain, and no data to synchronise or go out of synchronisation.
- **Easy to use** | The Android App provides a modern, intuitive interface designed to be user friendly and easily adoptable for warehouse operatives.

Key Benefits

Quicker and more accurate stock picking resulting in fewer returns.

Live updates into Sage 200 when receipting and moving stock leads to improved stock accuracy and real-time visibility.

Full integration with Sage 200 Stock Take for quick and accurate stock taking with no manual update of counts.

Seamlessly works alongside other Sicon additions. Examples include Sicon Projects for issues and returns, Sicon Works Orders for picking and building assemblies, and Sicon Distribution for receipting containers of stock at goods in.

Simple inspection functionality ensures specified stock items can be passed or failed upon goods receipt.

What's Included?

The Sicon Barcoding & Warehousing module and users are available to buy from the Sage Marketplace on subscription and will run on an Android device (additional license required per bar code device).

Sicon Barcoding & Warehousing Named Handled Users Licences includes the Sicon Web API.

NB: a single Sage Web User Licence is required for the Sicon Web API (1 web user licence per site required) .

What you will need to provide:

- Wireless Network covering your warehouse area(s).
- Your chosen handset hardware options. Handheld device options are endless, but here are some examples of what is available: *Please refer to the Sicon Barcoding & Warehousing Help & User Guide for more information.*
 - Low cost option: e.g. Samsung Tab A6 (Android) plus rugged case, with JM Prime S700 Bluetooth trigger scanner. Total around £160.
 - Ruggedized option: e.g. JM Prime CM-2 (runs Android 11) at around £540.
